GitHub notes:

- After setup a repository now you may need to save your progress to the repository to prevent lose the progress. ==This tutorial is only for when if you are working with your own repository and making changes to the existing files or pushing any new files along with existing files and you didn't change the local folder location which you set while setting up the github repository.==

  ➔ Firstly you need to browse to the location of local folder using cmd as described in the setup part.

  ➔ Type "==git add .==" – selecting all the files

  ➔ Then type "==git commit –m "commit name"==" – getting ready to push.

➡ Then type "git branch –M main" – selecting

branch.

➡ Lastly type "git push -u origin main" – boom!!!

Your progress are now saved to the repository.
